

SEO Audit — Developer Action Report

TapuCalc / Tapu Harcı Land Registry Calculator

Generated: 29 June 2026

Scope

Read-only audit of the Next.js codebase (src/app, components, lib, public/images). This report lists checklist items that FAILED or need developer action. Passing items are documented in the companion audit response.

Total failing / action items: 29

Developer Action Items

Priority breakdown: High 7 | Medium 12 | Low 10

[A1] Title tag primary keyword at start (High)

Issue: Subpages use short titles like 'Hakkımızda | TapuCalc' without leading 'tapu' (src/app/tapu-harci-*/page.tsx, src/lib/seo.ts).

Action: Rewrite indexable page titles to lead with primary keyword, e.g. 'Tapu Harcı'.

[A2] Title tag length 50–60 characters (Medium)

Issue: Several titles are too short (e.g. 'Yazar | TapuCalc' ~18 chars) or homepage is borderline; not consistently 50–60 chars.

Action: Audit all titles in createPageMetadata() calls and normalize to 50–60 characters.

[A4] Meta description 140–160 characters (High)

Issue: Home description ~127 chars (src/lib/site.ts). Contact ~175 chars. Privacy/Terms/Disclaimer under 140 chars.

Action: Rewrite meta descriptions in site.ts and each page.tsx to 140–160 chars with natural keyword use.

[D8] Answer-first H2 structure (Medium)

Issue: Homepage sections (HowItWorks, WhoPays, etc.) use intro copy before direct answers; not answer-first per H2.

Action: Add a direct 1–2 sentence answer immediately under each major H2 before supporting detail.

[D9] Content date-stamped when refreshed (Medium)

Issue: Only author page shows 'Son güncelleme: Haziran 2026'. Homepage and guide sections lack visible last-updated dates.

Action: Add visible 'Son güncelleme' on homepage and key content sections; sync ArticleJsonLd dateModified.

[D10] Bold/italic for answer phrases (Low)

Issue: Sections use Tailwind font-semibold on UI labels, not semantic / on factual answer phrases in prose.

Action: Highlight key factual sentences in content with semantic strong/em, not decorative utility classes.

[E1] All images in WEBP format (High)

Issue: SVG assets used in InfoCards (info-registry-visual.svg, info-tax-compare-visual.svg) and refund-background.png (2.1MB) still present in public/images/.

Action: Convert decorative SVG/PNG assets to optimized WEBP; remove unused PNG duplicate.

[E2] Image compression thresholds (High)

Issue: refund-background.webp ~103KB (>100KB). refund-background.png ~2.1MB. hero-background.webp ~60KB OK.

Action: Recompress refund-background.webp under 100KB; delete refund-background.png from public.

[E6] Lazy loading below-fold images (Low)

Issue: InfoCardsSection images lack explicit loading='lazy' (src/components/sections/InfoCardsSection.tsx). Relies on Next default.

Action: Add loading='lazy' explicitly to all below-fold Image components for clarity and audits.

[F6] Topic cluster internal linking (Medium)

Issue: Weak cross-linking between About, Author, Contact, and homepage sections; only a few contextual links (Hero, FAQ, Guide).

Action: Add contextual links between pillar (homepage), About, Author, and Contact within first sections.

[F10] Related pages at bottom of tool pages (Low)

Issue: No 'related resources' block linking supporting pages at end of homepage/tool flow.

Action: Add related links component before footer on homepage (About, Author, Contact, FAQ anchor).

[G6] Video schema (Low)

Issue: No embedded video content or VideoObject schema in codebase.

Action: Add only if video content is produced; otherwise N/A.

[G8] Schema Rich Results validation (High)

Issue: No evidence of Google Rich Results Test / Schema.org validation in repo or CI.

Action: Run Rich Results Test on /, /tapu-harci-hakkinda, /tapu-harci-iletisim; fix any errors.

[H5] Thin pages handling (Medium)

Issue: Contact page is thin (~200 words). Legal pages are noindexed (OK) but Terms not linked in header.

Action: Expand contact page content or add supporting FAQ block; ensure Terms linked in nav if needed.

[I1] Author attribution on content pages (Medium)

Issue: AUTHOR_NAME appears in ArticleJsonLd and author page only; homepage long-form sections lack byline.

Action: Add author byline + link to /tapu-harci-yazar on homepage and About content.

[I4] Authoritative external citations (Medium)

Issue: Limited clickable links to GÖB/TKGM in body content; mostly plain text mentions.

Action: Add rel=noopener links to gib.gov.tr, tkgm.gov.tr in HowItWorks, FAQ, and payment sections.

[J1] Table of Contents for long pages (Medium)

Issue: Homepage exceeds 1500 words but has no jump-link TOC component.

Action: Add sticky or top TOC linking to #info, #how-it-works, #calculator-guide, #faq, etc.

[J2] Calculator above the fold (High)

Issue: On mobile (max-sm), hero paragraph/badges hidden but H1 still pushes calculator below fold on small screens (375×667).

Action: Reorder mobile hero (calculator first) or further compact H1 for sub-640px viewports.

[J6] CLS on calculator results (Medium)

Issue: AnimatePresence/motion results panel and dynamic height changes may cause layout shift; no explicit CLS guards.

Action: Reserve min-height for results area; test CLS in Lighthouse mobile.

[J8] Social sharing on content pages (Low)

Issue: ResultShareBar exists for calculator results only; no share buttons on About/Author/supporting pages.

Action: Add Open Graph share buttons to indexable supporting pages if social distribution is a goal.

[K1] Concise direct answer at top (High)

Issue: Homepage opens with marketing H1, not a 40–60 word direct answer snippet for AI/SGE.

Action: Add answer box under H1: what tapu harc1 is, %4 rate, who pays, in 40–60 v

[K5] Speakable schema (Low)

Issue: No SpeakableSpecification JSON-LD on key answer paragraphs.

Action: Add speakable schema to hero answer box and FAQ answers if pursuing voice/AEO.

[K8] Key Takeaways box (Medium)

Issue: No dedicated summary/takeaways component near top of homepage.

Action: Add bullet 'Önemli Noktalar' box after hero with 4–5 factual takeaways.

[K10] Citation-friendly language (Low)

Issue: Limited use of attributable phrasing ('492 Sayılı Harçlar Kanunu' present; fe

Action: Add sourced statements with linked official references in HowItWorks and Examples.

[K11] Wikipedia/Wikidata presence (Low)

Issue: No off-site directory/Wikipedia integration in codebase (off-page SEO).

Action: Marketing/off-page task: list brand on authoritative directories if applicable.

[K12] Consistent brand + tool naming (Medium)

Issue: SITE_NAME is 'TapuCalc' but public brand/logo uses 'Tapu Harc1' (constants

Action: Align SITE_NAME, titles, and logo text for consistent entity signals.

[K13] Avoid hedging in key facts (Low)

Issue: Disclaimer and body copy use hedging ('olabilir', 'tahmin', 'yalnızca bilgilen

Action: Use definitive phrasing for verified facts; keep hedging only in disclaimer blocks.

[K14] AI citation testing (Low)

Issue: No documented testing in ChatGPT/Gemini/Perplexity for brand citation.

Action: Manual QA task: test branded queries and log citation results.

[K15] Indexable static result pages (Medium)

Issue: Calculator results are client-side only; no crawlable URL or static HTML for result states.

Action: Optional: add shareable result URLs with server-rendered summary pages if indexation desired.

Recommended Implementation Phases

Phase 1 — Critical (Week 1)

- A4 Meta descriptions
- E1/E2 Image optimization
- G8 Schema validation
- K1 Direct answer box
- J2 Mobile calculator above fold

Phase 2 — On-Page SEO (Week 2)

- A1/A2 Title tags
- D8 Answer-first H2s
- D9 Date stamps
- I1 Author bylines
- I4 Official source links
- J1 Table of contents

Phase 3 — AEO & UX (Week 3)

- K8 Key takeaways
- F6 Topic cluster links
- H5 Expand thin pages
- J6 CLS fixes
- K12 Brand name alignment

Phase 4 — Optional / Off-page

- K11 Directory listings
- K14 AI citation testing
- K15 Shareable result URLs
- G6 Video schema
- J8 Social share on articles
